Himanshu Rathore

B.Tech CSE (Data Science)
Raipur, Chhattisgarh, India
himanshurathore2121@gmail.com — +91-8839162562
GitHub — LinkedIn

Professional Summary

Computer Science (Data Science) student with hands-on experience in AI-driven applications, scalable backend systems, and real-world product development. Built solutions across healthcare, governance, and agriculture domains. Strong in problem-solving, rapid prototyping, and delivering production-ready systems through national-level hackathons.

Technical Skills

Languages: Python, Java, JavaScript, TypeScript

AI / ML: Scikit-learn, TensorFlow (Basics), OpenCV, MediaPipe, Pandas, NumPy, Matplotlib

Web & Backend: ReactJS, Node.js, Express.js, FastAPI, REST APIs

Databases: MongoDB, MySQL, DBMS

Cloud & DevOps: Firebase, Google Cloud Platform (GCP), Vercel, Render, GitHub Actions

GenAI: OpenAI API, Prompt Engineering, NLP Pipelines

Operating Systems: Linux (Ubuntu), Windows

Tools: Git, GitHub, Postman

Soft Skills: Problem Solving, Teamwork, Leadership, Presentation

Experience

AI/ML Trainee (Project-Based) Jul 2025 – Aug 2025
Chhattisgarh Swami Vivekanand Technical University (CSVTU), Bhilai
Mentored by Dr. Narendra Kumar Dewangan

- Designed and deployed production-grade web applications integrating AI/ML workflows.
- Built and evaluated machine learning pipelines using Scikit-learn, including data preprocessing, feature engineering, and model validation.
- Developed AI-powered applications involving document intelligence, NLP pipelines, and data analysis using Python ecosystem tools.
- Applied concepts of classification, regression, and data visualization to real-world inspired datasets.
- Strengthened understanding of end-to-end ML workflows from data processing to deployment.

Full-Stack & AI Developer — Project Experience

- Designed and deployed scalable full-stack systems across healthcare, governance, and AI-driven applications.
- Built and integrated RESTful APIs using FastAPI and Node.js for real-time processing and backend services.
- Developed AI-powered solutions including document processing systems and intelligent automation workflows.
- Gained experience working on government-oriented systems including AI-powered industrial land monitoring solutions for CSIDC.
- Managed deployments using platforms like Vercel and Render, ensuring performance, scalability, and reliability.
- Worked in fast-paced environments delivering complete, production-ready solutions within strict timelines.

Education

Bachelor of Technology – Computer Science (Data Science) 2023 – 2027
Shri Shankaracharya Technical Campus, Bhilai
GDSC Member — Active in Hackathons and Google Cloud Study Jams
Relevant Coursework: DBMS, Operating Systems, Data Structures and Algorithms

Secondary Education 2022 – 2023
Shahid Smarak Higher Secondary School, Raipur

Projects

HealthScan – AI-Based Health Screening Platform
Live — GitHub

- Built a multi-modal AI health platform for neurological, cardiovascular, and mental health screening.
- Integrated ABDM (FHIR-based EHR) and Google Fit for real-time health monitoring.
- Implemented diabetes management, women health tracking, and AI-based early warning system.

NEURO-TEST – Neurological Assessment System
Live — GitHub

- Developed AI-based system for detecting Parkinson's, Alzheimer's, and Epilepsy risks.
- Used MediaPipe and audio analysis for motor and speech evaluation.
- Generated structured reports with findings and risk scoring.

LandGuard – AI-Powered Land Monitoring System

- Winner — CSIDC Industrial Innovation Hackathon (IIIT Naya Raipur 2026).
- Built satellite-based AI system using Sentinel-2 imagery for land compliance monitoring.
- Implemented violation detection (encroachment, vacant land, green belt misuse) using OpenCV + FastAPI.
- Reduced monitoring cost by 90% by replacing drone surveys with satellite tracking.

NagarikAI – e-District Intelligence Platform

- Built AI-powered platform for grievance redressal, scheme management, and citizen services.
- Implemented smart classification, SLA prediction, and multilingual AI assistant.
- Developed dashboards, analytics, and automated workflow systems.

Soil-Sense – Smart Agricultural Monitoring System
GitHub

- Winner — State-Level Coding Competition (Chhattisgarh Silver Jubilee).
- Built IoT-based system with real-time soil monitoring and weather integration.
- Implemented AI-based crop recommendation and plant disease detection using OpenCV.

WastiFY – Smart Waste Monitoring System
Live — GitHub

- Built IoT-based waste monitoring system with real-time alerts and tracking.

Safari Flow – Inventory Management System
Live — GitHub

- Runner-Up — Hackbois 2025; Winner — Technovate 6.0 Hackathon.
- Built real-time inventory and billing system with role-based access.
- Implemented stock tracking, invoice generation, and low-stock alerts.

Achievements

- Finalist — Smart India Hackathon (SIH) 2025 (Hardware Edition), presented prototype at IIT Roorkee before ministry panel.
- Finalist — India Innovates 2026 (World's Largest Civic-Tech Hackathon), selected to present at Bharat Mandapam, New Delhi.
- Runner-Up — E-Summit 2026 Hackathon, IIIT Naya Raipur
- Winner — TECHNOVATE 6.0 Hackathon (Sponsor Track), IIIT Naya Raipur
- Runner-Up — Hackbois 2025 Hackathon, SSTC
- Winner — State-Level Coding Competition (Chhattisgarh Silver Jubilee)
- Winner — CSIDC Industrial Innovation Hackathon (LandGuard Project)
- Participated in 10+ National-Level Offline Hackathons, delivering real-world solutions under 24–48 hours.
