STEP 1: 2-DAY EMERGENCY PREPARATION MASTER PLAN

Evernorth Health Services (The Cigna Group) – Cybersecurity Technical Interview

Candidate: **Anshika Keshari** | B.Tech CSE (KIIT) | 8.32 CGPA

Target Role: Cybersecurity Internship (Threat Management, Intelligence, Analytics & Cloud)

1 Introduction: How to Use This 6-Part Dossier in 48 Hours

You have **48 hours** before your technical interview at Evernorth Health Services (The Cigna Group). Every hour must be spent on high-yield, structured preparation. This dossier is organized into 6 sequentially numbered PDF guides:

Step	Filename	Focus Area	Estimated Study Time
1	`01_START_HERE...pdf`	Master Battle Plan	**30 mins** (Roadmap, schedule, mindset).
2	`02_Evernorth_Company...pdf`	Deep Company Research	**3.5 hours** (What they do, challenges, role fit).
3	`03_Technical_Projects...pdf`	Smart Grid & AML Projects	**4.5 hours** (First-principles, math, Evernorth bridge).
4	`04_Core_CS...pdf`	Core CS Fundamentals	**4.0 hours** (Java OOP, DSA, OS, DBMS, Networks, Cloud).
5	`05_Cybersecurity...pdf`	Security Domain	**4.0 hours** (Threat Intel, MITRE, SIEM, Zero Trust, Incident Resp).
6	`06_Final_Review...pdf`	CheatSheet & Scripts	**1.5 hours** (The 90-sec pitch, handling blanks, questions).

2 The Hour-by-Hour 48-Hour Study Schedule

Battle Plan Directive: Day 1: Company Intelligence & Technical Projects Defense

- **09:00 – 12:30 (File 02: Company Intelligence):**
  - Understand Evernorth as the pharmacy and health services division of The Cigna Group (Fortune 15).
  - Master the Hyderabad Innovation Hub's mission (threat management, adversary simulation, SOC analytics).
  - Memorize the **"Golden Bridge Pitch"** connecting your background directly to Evernorth's JD.
- **12:30 – 13:30:** Lunch & Mental Refresh.
- **13:30 – 18:00 (File 03: Projects Masterclass):**
  - Master the **Smart Grid Graph Digital Twin**: GraphSAGE, FDIA evasion math ($a = Hc$), XAI Integrated Gradients, and sub-15ms mitigation. Bridge it to **Healthcare IoMT and hospital systems**.
  - Master the **AML Detection System**: 10,000+ logs, 98.2% precision, 15+ behavioral attributes, SMOTE without data leakage, and XGBoost. Bridge it to **SOC alert triage & security analytics**.
  - Rehearse the top 20 project grilling questions.
- **18:00 – 19:00:** Dinner & Physical Walk.
- **19:00 – 22:30 (File 04: Java OOP & DSA):**
  - Revise the 4 Pillars of OOP in Java with real code metaphors.
  - Practice HashMap internals (collisions, $O(1)$ vs $O(n)$) and Graph traversals (BFS/DFS).

Battle Plan Directive: Day 2: Core CS Systems, Security Domain & Mock Rehearsal

- **09:00 – 12:30 (File 04 Cont.: OS, DBMS, Networks & Cloud):**
  - OS: Process vs Thread, Deadlocks (4 Coffman conditions), Concurrency.
  - DBMS: ACID properties (bank/patient transfer example), Normalization, B+ Trees.
  - Networks & Cloud: OSI layers, DNS, TLS 1.3 handshake, Azure Key Vault & RBAC.
- **12:30 – 13:30:** Lunch & Mental Refresh.
- **13:30 – 17:30 (File 05: Cybersecurity Domain Mastery):**
  - Threat Intelligence: MITRE ATT&CK Framework tactics & techniques.
  - Vulnerability Management: CVEs, CVSS v3.1 scoring, and patch SLAs.
  - Metrics: MTTD, MTTR, False Positive Ratio, and SIEM Dashboards.
  - Security Architecture: Zero Trust, HIPAA/PHI data protection, and NIST Incident Response.
- **17:30 – 18:30:** Dinner & Relaxation.
- **18:30 – 21:00 (File 06: Final Rehearsal & Scripting):**
  - Practice saying your 90-second introduction aloud in front of a mirror or camera.
  - Memorize the 10 smart questions to ask Evernorth interviewers.
  - Sleep early (minimum 7.5 hours of sleep to ensure cognitive sharpness!).

3 The 3 Non-Negotiable Interview Rules

Emergency Rule: The 3 Rules to Clear the Technical Round

1. **Rule 1: Always Think Aloud.** The interviewer wants to assess your engineering thought process. Never sit in silence for 30 seconds. Say: *"Here is how I am analyzing this problem: first, let me clarify the constraints..."*
2. **Rule 2: Never Fake an Answer.** If asked about a tool you have not used (e.g., a specific proprietary SIEM tool): *"I haven't used that specific tool in production yet, but conceptually I understand it ingests log telemetry like Syslog and NetFlow, which relates to the data ingestion pipelines I built in Python. I am very eager to learn it."*
3. **Rule 3: Tie Everything to Evernorth's Mission.** Constantly remind the interviewer: *"In healthcare, security failures risk patient care and sensitive medical records. That's why high precision and automated mitigation are essential."*

Evernorth Critical Mission: Next Action

Proceed immediately to **File 02:** `02_Evernorth_Company_Research_And_Role_Fit.pdf` to master Evernorth's business, current cybersecurity challenges, and role fit!
